

Maxim Belioglo

Full-Stack Engineer | Security

maximbelioglo@gmail.com · +1 (347) 935-6517 · Tampa, FL · github.com/Max-the-dev · maximbelioglo.com

Security leader turned builder. Six years securing hedge funds, investment firms, and hospital systems: working directly with clients, running delivery teams, and closing multimillion-dollar engagements, with deep infrastructure expertise across financial and other regulated industries. Now founding engineer and CEO of a live social trading platform on Solana with 4,000+ users.

EXPERIENCE

Heyer Inc. | CEO & Founding Engineer

2026 – Present

Agent-native social trading platform & token launchpad on Solana — [hey.lol](#)

- Built the live trading system processing thousands of trades: execution, sub-second market data & charts, PnL tracking, and continuous reconciliation of user balances against on-chain state
- Wrote the platform's Solana programs in Rust, including a custom bonding curve launch mechanism, and security-audited them before mainnet deployment
- Authored the threat models & security architecture and implemented every control: three-tier multisig over privileged on-chain operations, database permissions, rate limiting & abuse prevention; zero security incidents since launch
- Shipped the observability layer: dashboards tracking security alerts, failed transactions & system health; 99.9% uptime since launch
- Designed the entire product UI & UX, from the social feed & DMs to onboarding & profiles, under a single visual identity

Rust | TypeScript | Solana | Postgres | Redis | WebSockets | Next.js | React | Tailwind

KJ Technology | Lead Consultant, Security & Infrastructure

2021 – 2024

- Owned a multimillion-dollar portfolio of 15 financial firms, including the group behind the largest crypto investment trusts, running every engagement from requirements & scoping through delivery
- Translated regulatory requirements into outcomes: SOC 1/2 readiness, NIST & CIS assessments, SEC examination prep, investor DDQs across PE portfolio companies, cyber insurance reviews
- Delivered 50+ projects across the client stack: MDM rollouts to large device fleets, M365 hardening, Azure identity & MFA, network security, and outsourced SOC, NOC & EDR run as one managed service

Additional experience: Account Executive at a healthcare MSP: sold & delivered \$2M in year one; revamped client onboarding & project execution. Systems Engineer at a national IT services firm: servers, cloud, networking & firewalls.

SELECTED PROJECTS

Readia — one of the first x402 consumer apps, where agents & humans write, publish, and purchase articles on equal footing

Logos — Readia's resident writing agent, with deep domain-specific research skills and writing styles

x402 Jobs — contributor; x402-powered marketplace for automated agentic tasks

x402 — contributor to the HTTP-native payments protocol (x402 Foundation)

IGSight — automation bot for creator insights & growth on Instagram

SKILLS

Engineering · TypeScript | Rust | Python | SQL | Node.js | React | Next.js | Postgres | CI/CD

Systems · Distributed systems | Real-time data pipelines | Payment systems | Ledger & balance reconciliation | REST API design | Observability | Cloud infrastructure

Product · Product design | UX design | Technical leadership | User acceptance testing (UAT)

Security & Compliance · Threat modeling | Security auditing | AuthN/AuthZ | Identity & access management (IAM) | Secrets & key management | Network security | Incident response | BCDR | Abuse prevention | SOC 1/2 | NIST | CIS | HIPAA

AI / Web3 · Agent skill development | Context engineering | Solana programs | On-chain transactions | Wallet infrastructure & multisig | Stablecoin payments

EDUCATION & CERTIFICATIONS

Franklin & Marshall College — B.A. Computer Science, Minor in Philosophy (2020) · **Posse Foundation Scholar** (full-tuition leadership scholarship)

CompTIA Security+ · CompTIA Network+ · English, Russian, Romanian, French
